Sommario/riassunto	This book reflects on 'the political' in queer theory and politics by revisiting two of its key categories: hegemony and heteronormativity. It explores the specific insights offered by these categories and the ways in which they augment the analysis of power and domination from a queer perspective, whilst also examining the possibilities for political analysis and strategy building provided by theories of hegemony and heteronormativity. By looking at the interplay between these two categories, this groundbreaking volume presents new possibilities of reconceptualizing 'the political' from a que

Sommario/riassunto	The monograph is devoted to a systematic study of means of Hilbert

space operators by a unified method based on the theory of double integral transformations and Peller's characterization of Schur multipliers. General properties on means of operators such as comparison results, norm estimates and convergence criteria are established. After some general theory, special investigations are focused on three one-parameter families of A-L-G (arithmetic-logarithmic-geometric) interpolation means, Heinz-type means and binomial means. In particular, norm continuity in the parameter is examined for such means. Some necessary technical results are collected as appendices.
