1.	Record Nr.	UNISA996466681203316
	Titolo	Applications of Field Theory to Statistical Mechanics [[electronic resource]] : Proceedings of the Sitges Conference on Statistical Mechanics Sitges, Barcelona/Spain, June 10–15, 1984 / / edited by L. Garrido
	Pubbl/distr/stampa	Berlin, Heidelberg : , : Springer Berlin Heidelberg : , : Imprint : Springer, , 1985
	ISBN	3-540-39134-7
	Edizione	[1st ed. 1985.]
	Descrizione fisica	1 online resource (VIII, 355 p. 3 illus.)
	Collana	Lecture Notes in Physics, , 0075-8450 ; ; 216
	Disciplina	536.7
	Soggetti	Thermodynamics Statistical physics Dynamical systems Quantum computers Spintronics Quantum physics Complex Systems Quantum Information Technology, Spintronics Quantum Physics Statistical Physics and Dynamical Systems
	Lingua di pubblicazione	Inglese
	Formato	Materiale a stampa
	Livello bibliografico	Monografia
	Note generali	Bibliographic Level Mode of Issuance: Monograph
	Nota di contenuto	Prologue A functional perturbative approach to the classical statistical mechanics -- The structure and statistical mechanics of glass -- The statistical mechanics of surfaces -- Surface effects in phase transitions -- On the Ising spin glass I. Mean field -- On the Ising spin glass II. Fluctuations -- The wetting transition -- Grassmann variables and supersymmetry in the theory of disordered systems -- Rigorous studies of critical behavior -- Anderson transition and nonlinear ?-model -- Non-perturbative renormalisation in field theory -- Stochastlc quantization: Regularization and renormalization -- Self avoiding random walk and the renormalisation group -- Field theory of the metal-insulator transitions in restricted symmetries -- Surface tension

and supercooling in solidification theory -- Order and frustration on a random topography -- On the equation ?? = ?2sinh ? and its applications -- The uses of Zeta-function regularization in the dielectric gauge theory of quark confinement -- One dimensional Heisenberg Ferromagnet equation and the Painleve test -- Nonlinear crystal growth near the roughening-transition -- The dynamics of bose-einstein condensation -- Decay properties of correlations in massless models : The method of correlation inequalities -- Nonasymptotic critical phenomena -- Large n expansions for paramagnetic to helical phase transitions -- The maximal chain model— a one dimensional system with a first-order phase transition -- Directed lattice animals and the Yang-Lee-Edge singularity -- Real space renormalization group treatment of superradiance -- Kondo effect in a one dimensional interacting electron system -- Time-dependent nucleation in systems with conserved order parameter -- Mastersymmetries for completely integrable systems in statistical mechanics -- Scaling approach to self-avoiding random walks and surfaces -- Long-time dynamics of coupled non-linear oscillators -- Nonlinear quantum fluctuation-dissipation relations -- Effects of surface exchange anisotropies on critical and multicritical behavior at surfaces -- Dirichlet forms and schrodinger operators.
