1. Record Nr.   UNISA996466757003316

   Autore   Farina Angiolo

   Titolo   Non-Newtonian Fluid Mechanics and Complex Flows [[electronic resource]] : Levico Terme, Italy 2016 / / by Angiolo Farina, Lorenzo Fusi, Andro Mikeli, Giuseppe Saccomandi, Adélia Sequeira, Eleuterio F. Toro ; edited by Angiolo Farina, Andro Mikeli, Fabio Rosso

   Pubbl/distr/stampa Cham : , : Springer International Publishing : , : Imprint : Springer, , 2018

   ISBN   3-319-74796-7

   Edizione   [1st ed. 2018.]

   Descrizione fisica 1 online resource (IX, 300 p. 121 illus., 33 illus. in color.)

   Collana   C.I.M.E. Foundation Subseries ; ; 2212

   Disciplina   532.053

   Soggetti   Mathematical physics
                      Partial differential equations
                      Mathematical Applications in the Physical Sciences
                      Partial Differential Equations

   Lingua di pubblicazione   Inglese

   Formato   Materiale a stampa

   Livello bibliografico   Monografia

   Nota di bibliografia   Includes bibliographical references.

   Nota di contenuto 1. Viscoplastic Fluids: Mathematical Modeling and Applications -- 2. An Introduction to the Homogenization Modeling of Non-Newtonian and Electrokinetic Flows in Porous Media -- 3. Old Problems Revisited From New Perspectives in Implicit Theories of Fluids -- 4. Hemorheology: Non-Newtonian Constitutive Models for Blood Flow Simulations -- 5. Lectures on Hyperbolic Equations and their Numerical Approximation.

   Sommario/riassunto This book presents a series of challenging mathematical problems which arise in the modeling of Non-Newtonian fluid dynamics. It focuses in particular on the mathematical and physical modeling of a variety of contemporary problems, and provides some results. The flow properties of Non-Newtonian fluids differ in many ways from those of Newtonian fluids. Many biological fluids (blood, for instance) exhibit a non-Newtonian behavior, as do many naturally occurring or technologically relevant fluids such as molten polymers, oil, mud, lava, salt solutions, paint, and so on. The term "complex flows" usually refers to those fluids presenting an "internal structure" (fluid mixtures, solutions, multiphase flows, and so on). Modern research on complex flows has increased considerably in recent years due to the many
