

1. Record Nr.	UNISA996466869103316
Autore	Pomp Andreas <1952->
Titolo	The boundary-domain integral method for elliptic systems / / Andreas Pomp
Pubbl/distr/stampa	Berlin ; ; Heidelberg : , : Springer-Verlag, , [1998] ©1998
ISBN	3-540-69697-0
Edizione	[1st ed. 1998.]
Descrizione fisica	1 online resource (XVI, 172 p.)
Collana	Lecture Notes in Mathematics ; ; 1683
Classificazione	65N38
Disciplina	510
Soggetti	Mathematics Differential equations, Partial Numerical analysis
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Bibliographic Level Mode of Issuance: Monograph
Nota di contenuto	Pseudohomogeneous distributions -- Levi functions for elliptic systems of partial differential equations -- Systems of integral equations, generated by Levi functions -- The differential equations of the DV model -- Levi functions for the shell equations -- The system of integral equations and its numerical solution -- An example: Katenoid shell under torsion.
Sommario/riassunto	This monograph gives a description of all algorithmic steps and a mathematical foundation for a special numerical method, namely the boundary-domain integral method (BDIM). This method is a generalization of the well-known boundary element method, but it is also applicable to linear elliptic systems with variable coefficients, especially to shell equations. The text should be understandable at the beginning graduate-level. It is addressed to researchers in the fields of numerical analysis and computational mechanics, and will be of interest to everyone looking at serious alternatives to the well-established finite element methods.
