

1. Record Nr.	UNISA996472064403316
Titolo	Process querying methods // edited by Artem Polyvyanyy
Pubbl/distr/stampa	Cham, Switzerland : , : Springer, , [2022] ©2022
ISBN	9783030928759 9783030928742
Descrizione fisica	1 online resource (541 pages) : illustrations
Disciplina	658.4034
Soggetti	Business - Data processing Process mining
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Includes index.
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	Intro -- Foreword -- References -- Preface -- References -- Contents -- Contributors -- Acronyms -- Introduction to Process Querying -- 1 Introduction -- 2 Process Querying -- 2.1 Objective -- 2.2 Definition -- 2.3 Methods -- 3 Process Querying Framework -- 3.1 Framework -- 3.2 Design Decisions -- 3.3 Challenges and Compromise -- 3.3.1 Challenges -- 3.3.2 Compromise -- 4 Conclusion -- References -- Part I Event Log Querying -- BP-SPARQL: A Query Language for Summarizing and Analyzing Big Process Data -- 1 Introduction -- 2 Background and Contributions Overview -- 3 Process Abstractions -- 4 Summarizing Big Process Data -- 5 Querying Big Process Data -- 5.1 Entity-Level Queries -- 5.2 Summarization Queries -- 5.3 Regular Expression Queries -- 5.3.1 Path Condition Queries -- 5.3.2 Path Node Queries -- 5.4 Metadata Queries -- 5.5 User-Defined Queries -- 6 Scalable Analysis Using MapReduce -- 7 Implementation -- 8 Process Querying Framework -- 9 Conclusion -- References -- Data-Aware Process Oriented Query Language -- 1 Introduction -- 2 Preliminaries -- 3 DAPOQ-Lang -- 3.1 Syntax -- 3.1.1 Terminal Meta Model Elements -- 3.1.2 Elements Related to Elements -- 3.1.3 Computation of Temporal Values -- 3.1.4 Temporal Interval Algebra -- 3.1.5 Operators on Attributes of Elements -- 3.1.6 Abstract Syntax -- 3.2 Semantics -- 4 Implementation and Evaluation -- 5 Application and

Use Cases -- 5.1 Business Questions in Process Mining -- 5.2
 Exporting Logs -- 5.3 Specialized Sublogs -- 5.4 Metrics, Artifacts, and
 Provenance -- 5.5 DAPOQ-Lang vs. SQL -- 6 DAPOQ-Lang and the
 Process Querying Framework -- 7 Conclusion -- References -- Process
 Instance Query Language and the Process Querying Framework -- 1
 Introduction -- 2 Background -- 3 Motivating Scenario -- 4 Process
 Instance Query Language -- 4.1 Syntax -- 4.2 Semantics -- 4.3
 Patterns and Predicates.
 5 Implementation -- 6 Application -- 6.1 Dashboard Enriched with
 PIQL -- 6.2 DMN Enriched with PIQL -- 6.3 Dataflow Enriched with PIQL
 -- 7 Framework -- 8 Conclusions and Future Work -- References --
 Part II Process Model Querying -- The Diagrammed Model Query
 Language 2.0: Design, Implementation, and Evaluation -- 1
 Introduction -- 2 Preliminaries -- 3 The Generic Model Query Language
 (GMQL) -- 3.1 Syntax -- 3.2 Semantics, Notation, and Query Example
 -- 3.3 The Transition from GMQL to DMQL -- 4 The Diagrammed Model
 Query Language (DMQL) -- 4.1 Syntax -- 4.2 Notation -- 4.3
 Semantics -- 4.4 Query Example -- 4.5 DMQL 2.0 -- 5 Evaluation --
 5.1 Runtime Complexity -- 5.2 Performance -- 5.3 Utility -- 6 GMQL,
 DMQL, and the Process Querying Framework -- 7 Conclusion --
 References -- VM*: A Family of Visual Model Manipulation Languages
 -- 1 Introduction -- 2 Examples -- 2.1 High-Level Process Models
 Expressed as Use Case Diagrams -- 2.2 Low-Level Process Models
 Expressed as Activity Diagrams -- 2.3 Low-Level Process Models
 Expressed as BPMN Diagrams -- 3 Query Language -- 3.1 Abstract
 Syntax -- 3.2 Concrete Syntax -- 3.3 Semantics -- 4 Implementation
 -- 5 Usability Evaluation -- 6 Applications and Use Cases -- 7 VM* and
 PQF -- 8 Conclusion -- References -- The BPMN Visual Query
 Language and Process Querying Framework -- 1 Introduction -- 2
 Background -- 3 BPMN VQL -- 3.1 Syntax -- 3.2 Semantics and
 Notation -- 4 Implementation and Evaluation -- 4.1 Implementation --
 4.2 Performance Evaluation -- 4.3 Empirical Evaluation -- 4.3.1
 Experiment Definition, Planning, and Design -- 4.3.2 Experimental
 Results -- 4.3.3 Discussion -- 5 Framework -- 6 Conclusion and
 Future Work -- References -- Retrieving, Abstracting, and Changing
 Business Process Models with PQL -- 1 Introduction -- 2 Use Cases --
 3 Fundamentals of Process Model Abstractions -- 3.1 Process Model.
 3.2 Changing Process Models -- 3.3 Process Model Abstractions -- 3.4
 Updating Process Models Based on Model Abstractions -- 4 The PQL
 Language -- 4.1 Overview -- 4.2 Selecting Process Models and Process
 Elements -- 4.3 Changing Process Models -- 4.4 Abstracting Process
 Models -- 4.5 Handling Process Views with PQL -- 4.5.1 Creating,
 Updating, and Deleting Process Views -- 4.5.2 Changing Abstracted
 Process Models -- 5 Implementation -- 5.1 Software Architecture --
 5.2 Processing Pipeline -- 5.3 PQL Lexer and Parser -- 6 PQL and the
 Process Querying Framework -- 6.1 Part 1: Model, Simulate, Record,
 and Correlate -- 6.2 Part 2: Prepare -- 6.3 Part 3: Execute -- 6.4 Part
 4: Interpret -- 7 Conclusion -- References -- QuBPAL: Querying
 Business Process Knowledge -- 1 Introduction -- 2 Business Process
 Knowledge Base -- 2.1 Business Process Schemas -- 2.2 Behavioral
 Semantics -- 2.3 Semantic Annotations -- 2.3.1 Rule-Based Ontologies
 -- 2.3.2 Terminological Annotations -- 2.3.3 Functional Annotations
 -- 3 Querying the Business Process Knowledge Base -- 3.1 Syntax --
 Predicates of the WHERE Statement -- 3.2 Semantics -- 3.3 Query
 Examples -- 4 Use Cases -- 5 Implementation -- 5.1 Graphical User
 Interface -- 5.2 Application Logic -- 5.3 Knowledge Layer -- 6
 Framework -- 7 Conclusions and Future Work -- References -- CRL
 and the Design-Time Compliance Management Framework -- 1

Introduction -- 2 CRL Framework -- 2.1 "Model" Part -- 2.2
 "Knowledge" Part -- 2.3 "Execute" Part -- 2.4 "Interpret" Part -- 3
 Case Study -- 4 Linear Temporal Logic -- 5 Compliance Request
 Language -- 5.1 Syntax, Notation, and Semantics -- 5.2 Atomic
 Patterns -- 5.3 Resource Patterns -- 5.4 Composite Patterns -- 5.5
 Timed Patterns -- 6 Implementation -- 7 Validation and Evaluation --
 8 Discussion and Conclusion -- References -- Process Query Language
 -- 1 Introduction.
 2 Motivating Examples -- 3 Process Query Language -- 3.1 Process
 Querying -- 3.1.1 Behavioral Predicates -- 3.1.2 Scenarios -- 3.2
 Process Manipulation -- 4 Process Querying Framework -- 5
 Implementation -- 6 Discussion -- 6.1 Querying and Manipulation --
 6.2 Quality -- 6.3 Suitability -- 6.4 Decidability and Efficiency -- 7
 Conclusion -- References -- Part III Event Log and Process Model
 Querying -- Business Process Query Language -- 1 Introduction -- 2
 Business Process Metamodel -- 3 Query Language -- 3.1 Syntax -- 3.2
 Semantics -- 3.2.1 Architecture of the Query Evaluation Mechanism --
 3.2.2 Environment Stack -- 3.2.3 Query Result Stack -- 3.2.4 Query
 Evaluation Procedure -- 3.2.5 Collections and Structs -- 3.2.6 Literals
 and Names -- 3.2.7 Algebraic Operators -- 3.2.8 Non-algebraic
 Operators -- 3.2.9 Imperative Constructs -- 3.2.10 Procedures and
 Functions -- 3.2.11 Predefined Context-Dependent Functions -- 4
 Monitoring Functions -- 4.1 Settlement of Travel Expenses Example --
 5 Architecture and Standardization -- 5.1 BPQL Embedded in BPMN --
 5.2 Architecture -- 6 Case Study -- 7 Conclusion -- References --
 Celonis PQL: A Query Language for Process Mining -- 1 Introduction --
 2 Background -- 2.1 Process Mining -- 2.2 Architecture Overview --
 2.3 History of Celonis PQL -- 2.4 Design Goals -- 3 Applications -- 4
 The Celonis Process Query Language -- 4.1 Language Overview -- 4.2
 Source and Target Operators -- 4.3 Variant Computation -- 4.4
 Conformance Checking -- 5 Use Cases -- 5.1 Working Capital
 Optimization by On-Time Payment of Invoices -- 5.2 Identifying Ping-
 Pong-Cases for Ticket Resolution Time Reduction -- 5.3 Fraud
 Prevention by Identifying Segregation of Duties Violations -- 6
 Implementation -- 7 Celonis PQL and the Process Querying Framework
 -- 8 Conclusion and Future Work -- References -- Part IV Other
 Process Querying Methods.
 Process Querying Using Process Model Similarity -- 1 Introduction -- 2
 Measures of Business Process Similarity -- 2.1 Preliminaries -- 2.2
 Activity-Based Similarity Measures -- 2.3 Structure-Based Similarity
 Measures -- 2.4 Behavior-Based Similarity Measures -- 3 Indexing
 Structures for Business Process Similarity -- 3.1 Tree-Based Index and
 Proper Metrics -- 3.2 F-Net -- 4 Use Case: Finding Optimal
 Outsourcing Partners -- 4.1 Scenarios and Requirements for Business
 Process Outsourcing -- 4.2 Matching and Similarity Measures -- 4.3
 Post-Matching -- 4.4 Similarity Measures in Business Process
 Outsourcing -- 5 Process Similarity Querying and the Process Querying
 Framework -- 6 Conclusion -- References -- Logic-Based Approaches
 for Process Querying -- 1 Introduction -- 2 Background -- 2.1
 Business Process Model and Notation -- 2.2 The Soundness Property --
 3 Process Querying Using Prolog -- 3.1 Expressing the Model as Logic
 Facts -- 3.2 Checking Syntactical Correctness -- 3.3 Checking for
 Proper Layout -- 3.4 Locating Patterns Indicating a Soundness Violation
 -- 3.5 Locating Incorrect and Ambiguous Labels -- 3.6 Suggesting
 Process Model Refactoring -- 3.7 Suggesting Process Improvements --
 4 Process Querying Using Semantic Technologies -- 4.1 Querying
 Process Models Stored as Ontologies -- 4.2 Querying Process Models
 Stored in Graph-Oriented DB -- 5 Process Querying Framework -- 6

Conclusion -- References -- Process Model Similarity Techniques for
Process Querying -- 1 Introduction -- 2 Foundations -- 2.1 Business
Process Model -- 2.2 Business Process Instances -- 2.3 Business
Process Model Matching -- 2.4 Business Process Model Similarity --
2.5 Evaluation Measures -- 3 Process Model Querying and Similarity-
Based Search -- 4 Selection of Similarity Techniques -- 4.1 Latent
Semantic Analysis-Based Similarity Search.
4.2 Similarity Score Based on Common Activity Names.
