As economic conditions and mobility systems changed in the twentieth century, this aspect of workers' lives underwent significant transformations. Historians have only begun to unravel how power and social inequality informed the governance of everyday mobility. Amid the turmoil of twentieth century economic booms and busts, war and austerity, and processes of (carcentered) suburbanization, how did low-income, rural, and migrant workers get to work in the Netherlands? Governing Workers' Mobility explores the political choices underlying workers' daily commute. Using

archival collections, it uncovers the shaping role of workers and

employers, detailing their understanding and response to past mobility

barriers. It discusses workers' discovery of bicycles, buses, mopeds, and cars; highlights company efforts to support and control employees' mobility; and shows that today's predicaments have a longer history.
