

1. Record Nr.	UNISA996495163303316
Autore	Gao Nansha
Titolo	Dynamic equivalent modeling of acoustic metamaterials : solving problem of noise and vibration / / Nansha Gao, Jie Deng
Pubbl/distr/stampa	Singapore : , : Springer, , [2022] ©2022
ISBN	981-19-4371-0
Descrizione fisica	1 online resource (185 pages)
Disciplina	700
Soggetti	Noise control
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di bibliografia	Includes bibliographical references.
Nota di contenuto	Intro -- Preface -- Research and Application on Dynamic Equivalent Inverse Problem of Acoustic Metamaterials -- Contents -- 1 Introduction -- 1.1 Research Background and Significance -- 1.1.1 The Harmful Effects of Vibrations and Noise -- 1.1.2 Vibration and Noise Control Methods -- 1.2 Review of Phononic Crystals and Acoustic Metamaterials -- 1.2.1 The History of Development of Phononic Crystals and Acoustic Metamaterials -- 1.2.2 Equivalence Theory of Phononic Crystals and Acoustic Metamaterials -- 1.2.3 Recent Development Trend of Phononic Crystals and Acoustic Metamaterials -- 1.3 A Brief Introduction into the Research Done in this Work -- 1.3.1 Research Contents -- 1.3.2 Book Structure Organization -- References -- 2 Basic Theories of Acoustic Metamaterials for Solving the Dynamic Equivalent Inverse Problem -- 2.1 Introduction -- 2.2 Basic Theories of Acoustic Metamaterials -- 2.2.1 Wave Equations in Elastic Media -- 2.2.2 Lattice Theory of Photonic Crystals -- 2.2.3 Bloch's Theorem and Brillouin Zones -- 2.3 A Theory of Dynamic Equivalence for Solving the Inverse Problems of Acoustic Metamaterials -- 2.3.1 Methods of Calculating the Dispersion Relation and Energy Band Relation of Acoustic Metamaterials -- 2.3.2 Theoretical Model of Dynamic Equivalence for Solving the Inverse Problems of Acoustic Metamaterials -- 2.3.3 Theoretical Model for Solving the Inverse Problems of Acoustic-Electric Analogical Equivalence -- 2.4 Chapter Summary -- References -- 3 Theoretical Model for Solving the Inverse-Problem

of Dynamic Equivalent Media of Periodic Rod-Beam Structures -- 3.1
 Introduction -- 3.2 Periodic Rod-Beam Structures -- 3.2.1 Calculation
 Model of Periodic Rod-Beam Structure -- 3.2.2 Dispersion Relation
 and Energy Band Relation of the Periodic Rod-Beam Structure -- 3.2.3
 Vibration Mode Analysis for the Periodic Rod-Beam Structure.
 3.3 Theoretical Model for Solving the Inverse Problems of Dynamic
 Equivalent Media of Periodic Rod-Beam Structures -- 3.3.1 Wave
 Equations of Beam Structures -- 3.3.2 Calculation of Dynamic
 Equivalent Material Parameters of Periodic Beam Structures -- 3.3.3
 Verification of Dynamic Equivalent Material Parameters of the Periodic
 Beam Structure -- 3.4 Theoretical Model for Solving the Inverse
 Problems of Dynamic Equivalent Media of Periodic Rods -- 3.4.1 The
 Wave Equation of a Rod -- 3.4.2 Calculation of Dynamic Equivalent
 Material Parameters of Periodic Rods -- 3.4.3 Verification by Dynamic
 Equivalent Material Parameters of Periodic Rod Structures -- 3.5
 Chapter Summary -- References -- 4 Theoretical Model for Solving
 the Inverse Problems of Dynamic Equivalent Media of Periodic Plate
 Structures -- 4.1 Introduction -- 4.2 Periodic Plate Structure
 with Circular Holes -- 4.2.1 A Model of Periodic Plate Structure
 with Circular Holes -- 4.2.2 Dispersion Relation and Energy Band
 Relation of Periodic Plate Structures with Circular Holes -- 4.3
 Theoretical Model for Solving the Inverse Problems of Dynamic
 Equivalent Media of Periodic Plate Structures with Circular Holes --
 4.3.1 The Wave Equation of a Plate Structure -- 4.3.2 Calculation
 of Dynamic Equivalent Material Parameters of Periodic Plate Structures
 with Circular Holes -- 4.3.3 Verification of Dynamic Equivalent Material
 Parameters of the Periodic Plate Structure with Circular Holes -- 4.4
 Chapter Summary -- References -- 5 Study on the Vibration
 Characteristics of a Gradient Rod Based on the Theoretical Model
 for Solving the Inverse Problem of the Dynamic Equivalent Medium --
 5.1 Introduction -- 5.2 Gradient Rod Structure -- 5.2.1 Dispersion
 Relation and Energy Band Relation of a Cell Structure of the Gradient
 Rod Structure.
 5.2.2 Dynamic Equivalent Material Parameters of a Cell Structure
 of the Gradient Rod -- 5.2.3 Equivalent Model of Gradient Rod -- 5.3
 Propagation Characteristics of the Gradient Rod Structure -- 5.3.1
 Theoretical Analysis of Vibration Propagation Characteristics
 of the Gradient Rod Structure -- 5.3.2 Finite Element Analysis
 of Vibration Transmission Characteristics of the Gradient Rod Structure
 -- 5.4 Chapter Summary -- Reference -- 6 Study on the Low-
 Frequency Bandgap Mechanism of a Multilayer Slit-Tube Structure
 Based on the Acoustic-Electric Analogical Equivalent Model -- 6.1
 Introduction -- 6.2 Multilayer Slit-Tube Acoustic Metamaterials --
 6.2.1 Dispersion Relation Calculation of Multilayer Slit-Tube Acoustic
 Metamaterials -- 6.2.2 Dispersion Relation Analysis of Multilayer Slit-
 Tube Acoustic Metamaterials -- 6.2.3 Vibration Mode Analysis
 of Multilayer Slit-Tube Acoustic Metamaterials -- 6.3 Acoustic-Electric
 Analogical Equivalent Model for Multilayer Slit-Tube Acoustic
 Metamaterials -- 6.3.1 Acoustic-Electric Analogical Equivalent Model
 Under Resonant Modes -- 6.3.2 Influencing Factor Analysis of Resonant
 Modes Based on the Acoustic-Electric Analogical Equivalent Model --
 6.4 Study on the Acoustic Transmission Characteristics of Finite Rows
 of Multilayer Slit-Tube Structures -- 6.5 Inverse Design of a Multi-
 Layer Slit-Tube Structure Based on the Acoustic-Electric Analogical
 Equivalent Model -- 6.6 Experimental Test and Data Analysis -- 6.6.1
 Design and Preparation of Samples -- 6.6.2 Test Principles of Standing
 Wave Tubes -- 6.6.3 Experimental Test Scheme -- 6.6.4 Experimental
 Results and Discussion -- 6.7 Chapter Summary -- References.
