

1. Record Nr.	UNISA996499867403316
Titolo	Recent advances in mechanics and fluid-structure interaction with applications : the Bong Jae Chung Memorial volume / / Fernando Carapau, Ashwin Vaidya, editors
Pubbl/distr/stampa	Cham, Switzerland : , : Birkhauser, , [2022] ©2022
ISBN	3-031-14324-8
Descrizione fisica	1 online resource (385 pages)
Collana	Advances in mathematical fluid mechanics
Disciplina	620.106
Soggetti	Fluid mechanics Fluid-structure interaction Mecànica de fluids Homenatges Llibres electrònics
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di bibliografia	Includes bibliographical references.
Nota di contenuto	Intro -- Preface -- Personal Memories and Tributes -- Publications by Bong Jae Chung -- Contents -- Part I Theory -- Natural Second-Order Regularity for Systems in the Case 1< -- p2 Using the A-Approximation -- 1 Introduction -- 2 On the A-Approximation of an Operator and Its Properties -- 2.1 Notation -- 2.2 N-Functions -- 2.3 Nonlinear Operators with (p,)-Structure -- 2.4 Approximation of a Nonlinear Operator -- 3 On the Existence and Uniqueness of Regular Solutions for the Approximate Problem -- 3.1 Description and Properties of the Boundary -- 3.2 Regularity Results with Possible Dependencies on A -- 4 Estimates Uniform with Respect to A for the Solutions of the Approximate Problem -- 5 Passing to the Limit -- 6 On the Time-Dependent Problem -- References -- Three-Dimensional Velocity Field Using the Cross-Model Viscosity Function -- 1 Introduction -- 2 Governing Equations -- 3 Main Results and Simulations -- 3.1 Constant Mean Pressure Gradient -- 3.2 Nonconstant Mean Pressure Gradient -- 4 Conclusions -- References -- Small Forced Oscillation of a Rigid Body in a Viscous Liquid -- 1

Introduction -- 2 Preliminary Results -- 3 Main Result -- References --
 Critical Density Triplets for the Arrestment of a Sphere Falling in a
 Sharply Stratified Fluid -- 1 Introduction -- 2 Setup and Governing
 Equations -- 2.1 Setup Description -- 2.2 Nondimensionalization --
 2.3 The Potential Energy -- 3 Experimental Methods and Results -- 3.1
 Tank, Bath, and Camera Setup -- 3.2 Stratification Setup -- 3.3
 Experimental Results -- 4 Critical Density and Energy Criterion -- 4.1
 Zero Density Transition Layer Thickness -- 4.2 Nonzero Density
 Transition Layer Thickness -- 5 Conclusion and Discussion --
 Appendix -- Numerical Method -- References -- Part II Computation
 -- Numerical Investigation of Incompressible Fluid Flow in Planar
 Branching Channels.
 1 Introduction -- 2 Mathematical Model -- 2.1 Governing Equations --
 3 Numerical Methods -- 3.1 Artificial Compressibility Method -- 3.2
 Finite Difference Solver -- 3.2.1 Immersed Boundary Method -- 3.2.2
 Lax-Friedrichs Scheme -- 3.2.3 MacCormack Scheme -- 3.2.4
 Numerical Stabilization -- 3.3 Finite Volume Solver -- 4 Numerical
 Simulations -- 4.1 Test Case Description -- 4.1.1 Domain Geometry --
 4.1.2 Boundary Conditions -- 4.2 Numerical Results -- 5 Conclusions
 and Remarks -- References -- Consistent C Element-Free Galerkin
 Method for Finite Strain Analysis -- 1 Introduction -- 2 Interpolation --
 2.1 General Approach for Moving Least Squares -- 2.2 Quasi-Singular
 Weight Function -- 3 Discrete Equilibrium Equations -- 4
 Hyperelasticity/Plasticity Using the Elastic Mandel Stress Tensor -- 4.1
 Formulation -- 4.2 Constitutive Integration -- 4.3 Specific Yield
 Function -- 5 Numerical Tests -- 5.1 Straight Cantilever Beam with
 Closed-Form Solution -- 5.2 Billet Upsetting Test -- 5.3 Tension Test
 -- 6 Conclusions -- Appendix -- First and Second Variations of $\det[C]$
 -- References -- Physics-Informed Bias Method for Multiphysics
 Machine Learning: Reduced Order Amyloid- Fibril Aggregation -- 1
 Multiphysics Modeling -- 1.1 Amyloid- Fibril Aggregation -- 1.2
 Complex Multiphysics Modeling Costs -- 1.3 Amyloid- Aggregation
 Model -- 2 Physics-Informed Machine Learning -- 2.1 Amyloid- Fibril
 Aggregation -- 3 Case Study: Training Set Bias Method for Modeling
 Amyloid- Aggregation -- 4 Conclusions -- References -- Reduced
 Order Model Closures: A Brief Tutorial -- 1 Introduction -- 2 A Crash
 Course in ROM Closure: A Toy Problem -- 3 Galerkin ROM (G-ROM) --
 4 The Closure Problem and Its Solution: The Closure Model -- 4.1 The
 Closure Problem -- 4.2 The Closure Model -- 4.2.1 The Ideal ROM (I-
 ROM) -- 4.2.2 Closure Model Construction.
 5 The Data-Driven Variational Multiscale ROM (D2-VMS-ROM) -- 5.1
 Model Form Ansatz -- 5.2 Least Squares Problem -- 6 ROM Closures in
 Action: Numerical Results -- 7 Mathematical Foundations of ROM
 Closures -- 8 Conclusions and Outlook -- References -- Artificial
 Stress Diffusion in Numerical Simulations of Viscoelastic Fluid Flows --
 1 Introduction -- 1.1 Motivation -- 1.2 Artificial Diffusion Concept --
 1.3 Tensorial Stress Diffusion in Oldroyd-B-Like Models -- 1.4
 Structure and Aim of This Work -- 2 Mathematical Model -- 2.1
 Equations of Motion -- 2.2 Constitutive Relation: Oldroyd-B Model --
 2.3 Dimensionless Form of Equations -- 2.4 Boundary Conditions --
 2.5 Variational Formulation -- 3 Numerical Approximation -- 3.1
 Discretization in Time: Convective Term -- 3.2 Discretization in Space
 -- 4 Artificial Stress Diffusion Implementation -- 5 Numerical Results
 -- 5.1 Constant Diffusion Coefficient -- 5.2 Time-Dependent Diffusion
 Coefficient -- 5.3 Time-Derivative-Dependent Diffusion Coefficient --
 5.4 Residual Diffusive Term -- 6 Conclusions and Remarks --
 References -- Cellular Automata Describing Non-equilibrium Fluids
 with Non-mixing Substances -- 1 Introduction -- 2 Preliminaries and

Definitions -- 2.1 Singular Perturbation and Pattern Stability -- 2.2
 Assembly of CA Code Rules -- 2.3 Canonical Assembly of a CA Rule --
 3 Case Study: Rule 3E6IGS58S -- 3.1 Canonical Assembly of Rule
 3E6IGS58S -- 3.2 Perturbations of the Canonical Assembly -- 4
 Conclusions and Further Developments -- References -- Part III
 Experiments -- Circular Causality and Function in Self-Organized
 Systems with Solid-Fluid Interactions -- 1 Introduction -- 2 Exemplary
 Dissipative Structures -- 2.1 The Electrical Self-Organized Foraging
 Implementation: E-SOFI -- 2.2 The Chemical Self-Organized Foraging
 Implementation: C-SOFI.
 3 Agent-Environment Reciprocities as a General Framework for Self-
 Organization -- 4 Conclusions -- References -- Hydrokinetic Energy
 Harvesting Potential of Triangular Prisms and Cross Cylinders -- 1
 Introduction -- 2 Methods -- 3 Results -- 3.1 Data Comparison from
 the Cross Cylinder Turbine Model -- 3.2 Results from the Cross
 Cylinder Turbine Models -- 3.3 Results from Triangular Prism with
 Straight Sides -- 3.4 Results from Triangular Prism with Curved Sides
 -- 3.5 Summary and Discussion -- 4 Conclusion -- References -- Part
 IV Applications -- Fickian and Non-Fickian Transports in Ultrasound
 Enhanced Drug Delivery: Modeling and Numerical Simulation -- 1
 Introduction -- 2 Coupling Acoustic Pressure with Drug Transport -- 3
 Qualitative Behavior of the Total Mass -- 4 Stability Analysis -- 5
 Numerical Simulations -- 6 Conclusions -- References --
 Computational Analysis to Study the Efficiency of Shear-Activated
 Nano-Therapeutics in The Treatment of Atherosclerosis -- 1
 Introduction -- 2 Methods -- 2.1 Computational Fluid Dynamics (CFD)
 Analysis -- 2.2 Particle Trajectories -- 2.3 Breakup Criterion -- 2.4
 Interpolation of Flow Data -- 2.5 Initial Conditions -- 2.6 Particle
 Ricochet Assumption -- 2.7 Convergence Test -- 3 Results -- 3.1
 Optimal Breakup Threshold -- 3.2 Specific Density -- 3.3 Particle
 Diameter -- 3.4 Stenosis Shape and Location -- 4 Summary and
 Conclusion -- References -- Compressed CO₂ Refrigeration for Energy
 Storage and CO₂ Utilization -- 1 Introduction -- 2 Heat Transfer
 Analysis -- 2.1 Parallel-Flow Heat Exchanger -- 2.2 Counter-Flow Heat
 Exchanger -- 3 Results and Discussions -- 4 Conclusions --
 References -- A Two-Phase Model for Mucosal Aggregation and
 Clearance in the Human Tear Film -- 1 Introduction -- 2 Theoretical
 Model -- 2.1 The Fluid Model -- 2.2 Phase I: Mucoadhesion and
 Wrapping Mechanics -- 2.2.1 Adhesion Mechanics.
 2.2.2 Wrapping and Size of Aggregate -- 2.3 Phase II: The Particle
 Model -- 3 Computational Methods -- 3.1 The Fluid Model -- 3.2 The
 FSI Particle Model -- 4 Results -- 5 Discussion -- References.
