A closer look at the determinologisation process -- Neologisms in New Zealand Sign Language: A case study of COVID-19 pandemic-related signs -- Using Wiktionary revision history to uncover lexical innovations related to topical events: Application to Covid-19 neologisms

Sommario/riassunto

This volume brings together contributions by international experts reflecting on Covid19-related neologisms and their lexicographic processing and representation. The papers analyze new words, new meanings of existing words, and new multiword units, where they come from, how they are transmitted (or differ) across languages, and how their use and meaning are reflected in dictionaries of all sorts. Recent trends in as many as ten languages are considered, including general and specialized language, monolingual as well as bilingual and printed as well as online dictionaries.
