

1. Record Nr.	UNISA996503552803316
Autore	Lam King-Yeung
Titolo	Introduction to reaction-diffusion equations : theory and applications to spatial ecology and evolutionary biology / / King-Yeung Lam and Yuan Lou
Pubbl/distr/stampa	Cham, Switzerland : , : Springer, , [2022] ©2022
ISBN	3-031-20422-0
Descrizione fisica	1 online resource (316 pages)
Collana	Lecture Notes on Mathematical Modelling in the Life Sciences
Disciplina	780
Soggetti	Mathematics Equacions de reacció-difusió Llibres electrònics
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	Intro -- Preface -- Contents -- Part I Linear Theory -- Chapter 1 The Maximum Principle and the Principal Eigenvalues for Single Equations -- 1.1 The Maximum Principle for Single Parabolic Equations -- 1.2 The Comparison Principle for Semilinear Equations -- 1.3 The Principal Eigenvalue for Linear Elliptic Operators -- 1.4 Further Reading -- Problems -- References -- Chapter 2 The Principal Eigenvalue for Periodic-Parabolic Problems -- 2.1 Existence of the Principal Eigenvalue for Periodic-Parabolic Problems -- 2.2 Qualitative Properties of Periodic Principal Eigenvalues -- 2.2.1 The Hutson-Shen-Vickers Lemma -- 2.2.2 Small diffusion limit -- 2.2.3 Large diffusion limit -- 2.2.4 Monotonicity in frequency -- 2.3 Applications to Two-Species Competition Models in a Spatially and Temporally Varying Environment -- 2.4 Further Reading -- Problems -- References -- Chapter 3 The Maximum Principle and the Principal Eigenvalue for Systems -- 3.1 Comparison Principle of Cooperative Parabolic Systems -- 3.2 The Principal Eigenvalue of Cooperative Systems -- 3.2.1 Existence results -- 3.2.2 Asymptotic behavior of the principal eigenvalue -- 3.3 Comparison Principle and Principal Eigenvalue for Competitive Parabolic Systems -- 3.4 Further Reading -- Problems -- References -- Chapter 4 The Principal Floquet Bundle for Parabolic Equations -- 4.1 Existence

Results for Non-Divergence Form Parabolic Equations -- 4.2 Existence
 Results for Divergence Form Parabolic Equations -- 4.3 The
 Generalized Relative Entropy -- 4.4 Further Reading -- Problems --
 References -- Part II Ecological Dynamics -- Chapter 5 The Logistic
 Equation With Diffusion -- 5.1 A Reaction-Diffusion Model for a Single
 Species -- 5.2 The Logistic Equation -- 5.3 Critical Domain Size -- 5.4
 Further Reading -- Problems -- References -- Chapter 6 Spreading in
 Homogeneous and Shifting Environments.
 6.1 The Fisher-KPP Equation and the Definition of Spreading Speed --
 6.2 A Maximum Principle for Unbounded Domains -- 6.3
 Homogeneous Environments -- Traveling wave solutions -- Periodically
 Varying Environments -- 6.4 Shifting Environments -- Shifting
 environments with a moving source patch -- Shifting boundary
 connecting an unbounded sink and an unbounded source patch --
 Shifting boundary connecting two unbounded source patches and
 nonlocally pulling -- 6.5 Further Reading -- Problems -- References --
 Chapter 7 The Lotka-Volterra Competition-Diffusion Systems for Two
 Species -- 7.1 Elements from the Theory of Monotone Dynamical
 Systems -- 7.2 Lotka-Volterra Systems with Constant Coefficients --
 7.3 Lotka-Volterra Systems with Heterogeneous Coefficients -- 7.3.1
 Slow vs fast diffusing populations -- 7.3.2 Weak competition in a
 heterogeneous environment -- 7.4 Competition in an Advective
 Environment -- 7.5 Further Reading -- Problems -- References --
 Chapter 8 Dynamics of Phytoplankton Populations -- 8.1 Introduction
 -- 8.2 Single Species in a Eutrophic Water Column -- 8.2.1 Monotonicity
 of the single species model -- 8.2.2 Long-time dynamics of the single
 species model -- 8.3 Dynamics for Two Competing Phytoplankton
 Species -- Selection for more buoyant phytoplankton species -- 8.4
 The N-Species Model - Application of the Principal Floquet Bundle --
 8.4.1 A priori estimates -- 8.4.2 A rough estimate -- 8.4.3 The
 normalized principal bundle -- 8.4.4 A general exclusion criterion --
 8.5 Further Reading -- Problems -- References -- Part III Evolutionary
 Dynamics -- Chapter 9 Elements of Adaptive Dynamics -- 9.1
 Introduction -- 9.2 Evolution of Dispersal in Advective Environments --
 The invasion exponent -- The selection gradient -- Singular strategy
 -- Convergence stable strategy -- Evolutionarily stable strategy --
 Continuously stable strategy.
 Neighborhood invader strategy -- Dimorphism (coexistence of
 phenotypes) -- Evolutionary branching point -- 9.3 Further Reading --
 Problems -- References -- Chapter 10 Selection-Mutation Models --
 10.1 Populations Structured by a Phenotypic Trait -- The Case $= RN$
 -- 10.2 Populations Structured by Space and a Phenotypic Trait -- 10.3
 Further Reading -- Problems -- References -- Appendices -- Appendix
 A The Fixed Point Index -- A.1 Properties of the Leray-Schauder
 Degree -- A.2 The Fixed Point Index -- References -- Appendix B The
 Krein-Rutman Theorem -- B.1 Introduction -- B.2 Cones and Orderings
 -- B.3 The Classical Krein-Rutman theorem -- B.4 The Generalized
 Krein-Rutman theorem for Homogeneous Maps -- B.5 Further Reading
 -- Problems -- References -- Appendix C Subhomogeneous Dynamics
 -- C.1 Subhomogeneous Maps -- C.2 Subhomogeneous Semiflows --
 C.3 Further Reading -- Problems -- References -- Appendix D
 Existence of Connecting Orbits -- D.1 Discrete-Time Monotone
 Dynamical Systems -- D.2 Continuous-Time Monotone Dynamical
 Systems -- References -- Appendix E Abstract Competition Systems in
 Ordered Banach Spaces -- E.1 Discrete-Time Competition Systems --
 E.2 Continuous-Time Competition Systems -- E.3 Further Reading --
 Problems -- References -- Index.
