Sommario/riassunto	The LNCS journal Transactions on Large-scale Data and Knowledge- Centered Systems focuses on data management, knowledge discovery, and knowledge processing, which are core and hot topics in computer science. Since the 1990s, the Internet has become the main driving force behind application development in all domains. An increase in the demand for resource sharing across different sites connected through

networks has led to an evolution of data- and knowledge-management systems from centralized systems to decentralized systems enabling large-scale distributed applications providing high scalability. This 54th issue of Transactions on Large-Scale Data and Knowledge-Centered Systems, contains three fully revised and extended papers and two additional extended keynotes selected from the 38th conference on Data Management - Principles, Technologies and Applications, BDA 2022. The topics cover a wide range of timely data management research topics on Temporal Graph Management, Tensor-based Data Mining, Time-Series Prediction, Healthcare Analytics over Knowledge Graphs, and Explanation of Database Query Answers.

Sommario/riassunto

The First Bible of the Church describes of the shape of the Jewish Bible at the time of the New Testament, with a special focus on the significance of the Greek translation, the Septuagint. The Jewish defence of the Septuagint version and its reception into the early Church makes it a representative of the Jewish Bible tradition fully on a par with the Hebrew Bible. This fact is especially important because the Septuagint is extensively used in the New Testament writings, whereby it-and not the Hebrew Bible (the Masoretic text)-is the most obvious candidate for the title of the first Bible of
