

1. Record Nr.	UNISA996574711503316
Titolo	802.1X-2020 - IEEE Standard for Local and Metropolitan Area Networks : Port-Based Network Access Control // IEEE
Pubbl/distr/stampa	New York. : , : IEEE, , 2020
ISBN	1-5044-6440-0
Descrizione fisica	1 online resource (289 pages)
Disciplina	004.68
Soggetti	Local area networks (Computer networks) - Standards Metropolitan area networks (Computer networks) - Standards IEEE Standards Computer networks - Security measures - Standards Access control Authorization Media Access Protocol Authentication Security
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Sommario/riassunto	Port-based network access control allows a network administrator to restrict the use of IEEE 802(R) LAN service access points (ports) to secure communication between authenticated and authorized devices. This standard specifies a common architecture, functional elements, and protocols that support mutual authentication between the clients of ports attached to the same LAN and that secure communication between the ports, including the media access method independent protocols that are used to discover and establish the security associations used by IEEE 802.1AE(TM) MAC Security.
