Titolo	"N42.41-2021 - American National Standard Performance Criteria for Active Interrogation Systems Used for Homeland Security" // IEEE
Pubbl/distr/stampa	New York : , : IEEE, , 2022 ©2022
ISBN	1-5044-8500-9
Descrizione fisica	1 online resource (40 pages)
Disciplina	662.2
Soggetti	Explosives Gamma rays Neutrons
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Sommario/riassunto	The minimum performance criteria for active interrogation systems in homeland security applications are described in this standard. These systems are intended for non-intrusive inspection of closed containers, vehicles, and packages of a wide range of types and sizes. In these systems, the contents of an inspection zone are irradiated with penetrating ionizing radiation to determine the presence of a hidden substance-of-interest by the analysis of stimulated secondary radiations or absorption spectra that are indicative of the elemental and/or isotopic composition of the substances-of-interest (special nuclear material, explosives, chemical warfare agents).

Note generali	Refereed/Peer-reviewed
Sommario/riassunto	AJIC focuses on information and communication technology (ICT) issues at the global, regional and national level that have implications for developing countries in general, and for Africa and the Southern African region in particular, encouraging debate on different aspects of ICT policy, regulation, strategy and implementation. It is both a rigorous academic journal and a practical tool to inform the continent's ICT actors and decision-makers in government, industry and civil society
