Sommario/riassunto	A close analysis of the writings of Søren Kierkegaard reveals new relationships between the aesthetic and the religious. In this volume, detailed studies disclose a reciprocal conditionality that refers back to anthropological, theological, and art-theoretical premises. Thus, Kierkegaard's "aesthetic" texts propagate core religious themes, while

these themes in his religious writings are established by means of aesthetic considerations.

Liest man Søren Kierkegaards Schriften textanalytisch, lässt sich das Verhältnis des Ästhetischen und des Religiösen in seinem Werk ganz neu bestimmen. Statt dass beide einander ausschließen, wie oftmals im Anschluss an Kierkegaards eigenes Diktum angenommen, lässt sich durch eingehende Detailstudien eine reziproke Bedingtheit offenbaren, die auf anthropologische, theologische und kunsttheoretische Prämissen zurückverweist. So belegt die Arbeit bereits in Texten aus Entweder – Oder oder der Wiederholung religiöse Kernthesen (z.B. zum christlichen Paradox, zu Unmittelbarkeit und rezeptiver Selbstaufgabe) anhand der narratologischen Komposition, Semantik, Wiederholungs- und Gegensatzfiguren u.a. Anhand der bisher kaum beachteten, hochkomplexen stilistischen Struktur verschiedener religiöser Reden und der Einübung im Christentum wird gezeigt, dass deren theologischer Gehalt umgekehrt erst durch die Indienstnahe ästhetischer Verfahrensweisen, Motive und Denkweisen zu Stande kommt. Der Band vereint eine literaturwissenschaftliche mit einer theologischen und philosophischen Perspektive in faszinierenden Analysen und weist so den Weg in ein neues Verständnis von Kierkegaards Schaffen.

Sommario/riassunto

This two-volume set LNCS 16011 and 16012 constitutes the refereed post-conference proceedings of the 16th International Conference on Advances in Swarm Intelligence, ICSI 2025, held in Yokohama, Japan, during July 11-15, 2025. The 54 revised full papers presented in these proceedings were carefully reviewed and selected from 116 submissions. The papers are organized in the following topical sections: Particle Swarm Optimization; Swarm Optimization Algorithms; Swarm of Large Language Models; Agent and Multi-agents; Vehicle Routing; Multiobjective Optimization; Approaches for Classification and Feature Selection; Prediction and Detection Algorithms; Machine Learning.
