Sommario/riassunto	The Pacific region is in the final stage of the demographic transition with declining fertility and expanding life expectancy, where significant changes in population size and age distribution, i.e. "aging" have been and will be witnessed. They are unprecedented and going to affect economic growth in various ways. This book focuses on the Pacific region, one of the most rapidly aging regions, and examines the possible risk aspects. Particularly, the book takes into account of possible adjustments both endogenous and exogenous (including policy responses) to the new reality of agin
