| Nota di contenuto       | Special polymers -- Special properties of polymers -- Processing methods -- Recycling -- Wastewater treatment -- Pesticides -- |

Electrical uses -- Food engineering -- Medical uses.

Sommario/riassunto

"The focus of this book is the chemistry of environmental engineering and its applications, with a special emphasis on the use of polymers in this field. It explores the creation and use of polymers with special properties such as viscoelasticity and interpenetrating networks; examples of which include the creation of polymer-modified asphalt as well as polymers with bacterial adhesion properties. The text contains the issues of polymerization methods, recycling methods, wastewater treatment, types of contaminants, such as microplastics, organic dyes, and pharmaceutical residues"--
