

1. Record Nr.	UNISALENT0991000677559707536
Autore	Saraceno, Chiara
Titolo	Anatomia della famiglia : strutture sociali e forme familiari / Chiara Saraceno
Pubbl/distr/stampa	Bari : De Donato, 1977
Edizione	[2. ed.]
Descrizione fisica	161 p. ; 18 cm
Collana	Mediazioni ; 1
Disciplina	306.85
Soggetti	Famiglia - Sociologia
Lingua di pubblicazione	Italiano
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Esemplare in fotocopia

2. Record Nr.	UNINA9910253938603321
Titolo	Immune Metabolism in Health and Tumor / / edited by Bin Li, Fan Pan
Pubbl/distr/stampa	Dordrecht : , : Springer Netherlands : , : Imprint : Springer, , 2017
ISBN	94-024-1170-4
Edizione	[1st ed. 2017.]
Descrizione fisica	1 online resource (V, 223 p. 24 illus., 23 illus. in color.)
Collana	Advances in Experimental Medicine and Biology, , 0065-2598 ; ; 1011
Disciplina	616.079
Soggetti	Immunology Post-translational modification Medical microbiology Cancer - Research Posttranslational Modification Medical Microbiology Cancer Research
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di bibliografia	Includes bibliographical references.
Nota di contenuto	Metabolism in Immune Cell Differentiation and Function -- Metabolic Regulation of T cell Immunity -- Transcriptional regulation of T cell metabolism reprogramming -- Adipose tissue-resident regulatory T cells -- Immune cell metabolism in tumor microenvironment -- Regulation of Metabolism across Different Subsets of T Cells in Cancer -- Immunometabolism in Tumour Microenvironment .
Sommario/riassunto	This book offers a broad overview of the concepts and research findings in immunometabolism. The immune system is made up of numerous different cell types, pathways, and components that must be able to respond rapidly to a pathogen or cancer, but must also remain quiescent in the absence of challenges. Immune cells rely on metabolic pathways to adapt to changing environments and stimuli. Additionally, these cells can be modified in function or fate by fluctuations in available nutrients. The chapters in this book describe ways in which immune cells utilize and are regulated by metabolic pathways. Topics include how immune-cell metabolism shapes immune homeostasis, and how dysregulation of these pathways can lead to immune disorders. In different contexts, such as a tumor microenvironment,

immune-cell function and identity may be modified not only by cytokines and checkpoint molecules, but also by nutrient availability and other metabolic stimuli. Transcriptional reprogramming confers many of the changes in immune cell metabolism that are seen when a T-cell, for example, undergoes activation or functional adaptation to different environments. Lastly, immune cells can destructively or protectively participate in human metabolic homeostasis or disorders. This book summarizes immune-metabolism from a variety of different perspectives, including the ways in which metabolic cues, pathways, and requirements of immune cells change in conditions of homeostasis and activation. The exploration of the significance of metabolic checkpoints and other cues, particularly in the context of cancer and immune disorders, may form the foundation for the development of therapeutics.
