1. Record Nr. UNISALENTO991001246419707536

Autore Guerra, Luigi Francesco

Titolo La vita e il diritto : questioni del giorno / Luigi F.sco Guerra

Pubbl/distr/stampa Milano : Enrico Trevisini, [18..?]

Descrizione fisica 164 p.; 23 cm.

Disciplina 340.115

Soggetti Diritto e Societa - Studi

Lingua di pubblicazione Italiano

Formato Materiale a stampa

Livello bibliografico Monografia

Record Nr. UNINA9910437944903321

Autore Cavallini Fabio

Titolo Quasi-geostrophic theory of oceans and atmosphere: topics in the

dynamics and thermodynamics of the fluid Earth / / Fabio Cavallini,

Fulvio Crisciani

Pubbl/distr/stampa Dordrecht;; New York,: Springer, c2013

ISBN 1-283-63398-1

9786613946430 94-007-4691-1

Edizione [1st ed. 2013.]

Descrizione fisica 1 online resource (394 p.)

Collana Atmospheric and oceanographic sciences library, 1383-8601;; v. 45

Altri autori (Persone) CriscianiFulvio

Disciplina 551.4

Soggetti Geophysics - Fluid models

Fluid mechanics Oceanography

Atmospheric thermodynamics

Lingua di pubblicazione Inglese

Formato Materiale a stampa

Livello bibliografico Monografia

Note generali Description based upon print version of record.

Nota di bibliografia Includes bibliographical references and index.

## Nota di contenuto

Basic continuum Mechanics -- Kinematics of continua -- Dynamics of fluids -- Basic geophysical fluid dynamics -- Constitutive equations -- Internal gravity waves in adiabatic and frictionless fluids -- Rotating flows -- Large-scale flows -- Quasi-geostrophic single-layer models -- Shallow-water model -- Homogeneous model -- Quasi-geostrophic two-layer model -- Basic QG equations for the two-layer model -- Energetics of the two-layer model -- Quasi-geostrophic models of continuously stratified flows -- QG continuously stratified flows in the ocean -- QG continuously stratified flows in the atmosphere.

## Sommario/riassunto

Large scale flows are strong movements in the atmosphere and in the oceans, governed by the balance between Coriolis and pressure gradient forces (geostrophic equilibrium). This book describes the dynamics, mechanics and thermodynamics of these winds and currents. It is written for researchers, but also accessible for students in the field, since it also gives an overview of applied quasi-geostrophic theory suitable to advanced undergraduate and beginning graduate courses. Chapter 1 presents concepts and equations of classical inertial fluid mechanics. Chapter 2 deals with the equations of thermodynamics that close the governing equations of the fluids. Then, the motion is reformulated in a uniformly rotating reference frame. Chapter 3 deals with the shallow-water model and the homogeneous model of winddriven circulation. The chapter also describes a classical application of the Ekman layer to the atmosphere. Chapter 4 considers the two-layer model, as an introduction to baroclinic flows, together with the concept of available potential energy. Chapter 5 takes into account continuously stratified flows in the ocean and in the atmosphere.
