---

#### Sommario/riassunto

This book builds an information platform on China's industrial competitiveness, providing scientific design and application case studies for integrated analysis and decision-making facilities and mechanisms for enterprises, industries, financial institutions and governments, which can make up for the lack of adequate information in China's market operations, especially the problems of duplicate construction and vicious competition aggravated by the lack of systematically processed industrial information. This book not only pursues innovation in technical methods and application theories but also pursues the collection, processing and collation of relevant domestic and international data and development and application so as to provide primary results for an industrial competitiveness database adapted to government management needs. The research is closely related to the actual problems in China and extensively uses statistical data to make various model analyses, which has a relatively sizeable academic value.
