

1. Record Nr.	UNISALENTO991001334699707536
Autore	Guenot, Jacques
Titolo	Seminar in complex analysis and geometry 1987 : Centre de mathématiques de l'Ecole polytechnique, Palaiseau, 1976-1977 / édité par M. Demazure, H. Pinkham et B. Teissier
Pubbl/distr/stampa	Berlin : Commenda di Rende : Editel, Springer-Verlag, 1970
Descrizione fisica	vii, 134 p. ; 24 cm. vii, 221 p. ; 24 cm.
Collana	Seminars and conferences Lecture notes in mathematics, 0075-8434 ; 777
Classificazione	AMS 14J17 AMS 30-06 AMS 30-XX
Altri autori (Persone)	Badrikian, Albert Struppa, Daniele Carlo
Disciplina	515.9 516.35
Soggetti	Functions of a complex variable - Congresses
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia

2. Record Nr.	UNINA9910585942203321
Autore	Refice Alberto
Titolo	Improving Flood Detection and Monitoring through Remote Sensing
Pubbl/distr/stampa	Basel, : MDPI - Multidisciplinary Digital Publishing Institute, 2022
Descrizione fisica	1 online resource (158 p.)
Soggetti	Environmental science, engineering and technology History of engineering and technology Technology: general issues
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Sommario/riassunto	As climate-change- and human-induced floods inflict increasing costs upon the planet, both in terms of lives and environmental damage, flood monitoring tools derived from remote sensing platforms have undergone improvements in their performance and capabilities in terms of spectral, spatial and temporal extents and resolutions. Such improvements raise new challenges connected to data analysis and interpretation, in terms of, e.g., effectively discerning the presence of floodwaters in different land-cover types and environmental conditions or refining the accuracy of detection algorithms. In this sense, high expectations are placed on new methods that integrate information obtained from multiple techniques, platforms, sensors, bands and acquisition times. Moreover, the assessment of such techniques strongly benefits from collaboration with hydrological and/or hydraulic modeling of the evolution of flood events. The aim of this Special Issue is to provide an overview of recent advancements in the state of the art of flood monitoring methods and techniques derived from remotely sensed data.
