

1. Record Nr.	UNISALENTO991001404289707536
Autore	Anderson, Ian
Titolo	Surveys in combinatorics, 1985 / ed. Ian Anderson
Pubbl/distr/stampa	Cambridge : Cambridge University Press, 1985
ISBN	0521315247
Descrizione fisica	175 p. ; 23 cm
Collana	London Mathematical Society lecture note series, 0076-0552 ; 103
Classificazione	AMS 05-06 AMS 05-XX AMS 05C LC QA164
Disciplina	511.6
Soggetti	Combinatorial analysis
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia

2. Record Nr.	UNINA9910557346603321
Autore	Fabris Massimo
Titolo	Monitoring Land Subsidence Using Remote Sensing
Pubbl/distr/stampa	Basel, Switzerland, : MDPI - Multidisciplinary Digital Publishing Institute, 2021
Descrizione fisica	1 online resource (193 p.)
Soggetti	Research and information: general
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Sommario/riassunto	<p>In this book are reported nine works related to land subsidence monitoring using remote sensing techniques. Land subsidence is a common phenomenon in many regions of the world, where it causes degradation of local ecosystems and disruption of economic activities. Its effects are more evident in densely populated areas in particular in low-lying territories such as river deltas and coastal areas where the combination of land subsidence and sea level rise increases the flooding risk. For this reason, the monitoring of ground deformations is a crucial step to obtain important information for the development of risk mitigation strategies. In the presented papers, the characteristics of land subsidence occurring in different study areas are described, and recent developments in the used methodologies for the monitoring of the ground displacements are discussed and validated also by means of ground-based data. Moreover, advantages and disadvantages of the adopted techniques are highlighted. The outcomes of these research works can provide national and local authorities with useful information for the implementation of integrated monitoring systems in the areas most affected by land subsidence.</p>
