Sommario/riassunto

This volume contains the proceedings of EWSN 2007, the fourth European conference on Wireless Sensor Networks. The conference took place at TU Delft, January 29–31, 2007. Its objective was to provide a forum where researchers with different experience and background, from hardware to applications, would present and discuss the latest developments in the exciting field of wireless sensor networks. Since the interest in sensor networks has been rapidly expanding, it was no surprise that EWSN received a record number of 164 submissions, of which 22 papers were selected for the final conference. It was a pleasure to observe that, although based in Europe, the conference serves as a truly international forum with submissions originating from all five continents: 35% from Europe, 35% from Asia, 26% from America, 3% from Australia, and 1% from Africa. The selection process involved more than 500 reviews with most papers being evaluated by at least three reviewers. The final program covered a wide range of topics, grouped into seven sessions: networking, tracking, algorithms, applications and support, medium access control, OS and tools, and localization. In addition to the papers published in these proceedings, the conference also included a poster and demonstration session, of which separate proceedings are available. Tutorials and keynotes complemented the program, together making for a truly interesting conference. In closing, we would like to express our sincere gratitude to everyone who contributed to EWSN 2007. In particular, the members of the Program Committee and external reviewers responsible for the strong technical program, the local TU Delft people for streamlining the conference logistics, and Springer for their excellent cooperation in putting these proceedings together.
