Sommario/riassunto	American Jewish history has been criticized for its parochial nature because it has consisted largely of chronicles of American Jewish life and has often failed to explore the relationship between Jews and other ethnic groups in America. Rabbi Morris Newfield led Temple Emanuel in Birmingham from 1895-1940 and was counted among the most influential religious and social leaders of that city. Cowett chronicles Newfield's career and uses it as a vehicle to explore the nature of ethnic leadership in America. In doing so he explores the conflicts with which Newfield stru

Nota di contenuto	Chapter 1. Coping with uncertainty in development aid relations -- Chapter 2. Complexities, uncertainties and responses -- Chapter 3. Recipients are responsible donors too: On plural actorhood and role-switching -- Chapter 4. Practices of approximation: Simplifying the complex and controlling the future -- Chapter 5. In proper organization we trust: On extrapolation from proper organization proxies -- Chapter 6. Certainty for sale? - A historic expose on the role of external experts in development aid 1960s-2020s -- Chapter 7. Multivocal brokering: Translating and decoupling for results -- Chapter 8. Pragmatic bureaucracy - An antidote to obsessive measurement disorder?
Sommario/riassunto	The ebook edition of this title is Open Access and freely available to read online. Complex coordination across time, space, and cultures involves a great deal of uncertainty. This uncertainty may be accepted and handled with judgment and pragmatism, but more often in contemporary modern society, it is treated as a technical problem to be

'solved'. This is a book about the paradoxical implications of the quest for certainty in interorganizational relations in the complex field of development aid. Authors Alexius and Vahamaki scrutinize questions related to the concept Obsessive Measurement Disorder, i.e. what causes an increase in control mechanisms, and how and when can this prove counterproductive? They further investigate the question on why performance management - and measurement requirements seem in some instances to hinder, and in others to support the implementation of aid projects and programs. Drawing on 80 original interviews with aid bureaucrats working at different levels and in different organizations, including public agencies, companies, non-government organisations, and universities all involved in development aid projects financed fully, or in part, by the Swedish taxpayer, they identify coping mechanisms and responses that may help to prevent the extremes of obsessive measurement disorder, and foster instead pragmatic, constructive organizing and learning that benefits not only aid organizations and their employees, but also - and more fundamentally - the societies in need.

Sommario/riassunto	Food safety is a major problem around the world, both with regard to human suffering and with respect to economic costs. Scientific

advances have increased our knowledge surrounding the nutritional characteristics of foods and their effects on health. This means that a large proportion of consumers are much more conscious with respect to what they eat and their demands for quality food. Food quality is a complex term that includes, in addition to safety, other intrinsic characteristics, such as appearance, color, texture and flavor, and also extrinsic characteristics, such as perception or involvement.
