Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	6. Landed Supremacy -- 7. Industrial Revolution -- 8. Financial Hegemony -- 9. Hegemonic Building.
Sommario/riassunto	This two-volume book explores how the great buildings of England bear witness to a thousand years of the nation's history. In every age, investment in iconic buildings reaches a climax when the prevailing mode of production is operating most effectively, surplus wealth is most plentiful, and the dominant class rules supreme. During such periods of stability and prosperity, the demand for new buildings is strong, structural and stylistic innovations abound, and there is fierce competition to build for lasting fame. Each such climax produces a unique vintage of buildings that are an expression of cultural hegemony. They are monuments to the wealth and power of those who ruled their world. This second volume presents three case studies of iconic building investment from the eighteenth century to the present day. During the eighteenth century the wealth of the great landed estates funded the golden age of country house building by aristocracy

and gentry. During the nineteenth century the Industrial Revolution unleashed an unprecedented wave of infrastructure investment and civic building by the ascendant capitalist class. Since the late twentieth century the power of global financial capital has been symbolized by the relentless rise of city centre office towers. A final chapter argues that these different forms of hegemonic building are a physical manifestation of the underlying rhythm of English history.

Sommario/riassunto

This book draws on the author's experience in conducting pragmatic test accuracy studies on screening instruments for dementia/mild cognitive impairment. To facilitate comprehension and assimilation, all data is presented in an easily accessible, succinct and user-friendly way by means of a structured tabular format that allows tests to be easily compared. The pragmatic design of studies ensures high external validity and generalizability for the test results. The book includes a wealth of data on previously presented studies, as well as hitherto unreported test measures ("Number needed" metrics). It presents recently described and new diagnostic metrics (Likelihood to be diagnosed or misdiagnosed; Summary utility index; Number needed for screening utility); data from new studies on screeners (Attended with sign; Free-Cog; Two question depression screener; Jenkins Sleep Questionnaire; Triple test); and previously unpublished data (combination of SMC Likert and MACE; IADL Scale and MMSE). Given its scope, the book will be of interest to all professionals, beginners and seasoned experts alike, whose work involves the assessment of individuals with cognitive (memory) complaints.
