#### Sommario/riassunto

Representing work by some of the leading scholars in the field, the chapters of this handbook survey the transformation and innovation of religious traditions and practices in contemporary Japan. Readers will find lively scholarly studies about changes in the traditional institutions of Buddhism and Shinto, vivid examples of social activism as well as the so-called "new religions," examination of the relationship between religion and the state, and analysis of the religiosity of individuals encompassed by "spirituality," pilgrimage and tourism, and the marketing of religions. This groundbreaking collection of scholarly papers helps to map out the fascinating complexity and dynamism of religion in contemporary Japanese society and culture.

**Sommario/riassunto**

This book constitutes the thoroughly refereed post-proceedings of the 4th International Workshop on Automated Deduction in Geometry, ADG 2002, held at Hagenberg Castle, Austria in September 2002. The 13 revised full papers presented were carefully selected during two rounds of reviewing and improvement. Among the issues addressed are theoretical and methodological topics, such as the resolution of singularities, algebraic geometry and computer algebra; various geometric theorem proving systems are explored; and applications of automated deduction in geometry are demonstrated in fields like computer-aided design and robotics.
