

1. Record Nr.	UNISALENTO991002946179707536
Autore	Robertz, Daniel
Titolo	Formal algorithmic elimination for PDEs [e-book] / Daniel Robertz
Pubbl/distr/stampa	Cham [Switzerland] : Springer, 2014
ISBN	9783319114453
Descrizione fisica	1 online resource (viii, 283 pages)
Collana	Lecture notes in mathematics, 1617-9692 ; 2121
Classificazione	AMS 12H05 AMS 13P10 AMS 16S36 AMS 35-02 LC QA192.R62
Disciplina	512.94
Soggetti	Differential equations, Partial Elimination
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di bibliografia	Includes bibliographical references and index
Nota di contenuto	Introduction -- Formal Methods for PDE Systems -- Differential Elimination for Analytic Functions -- Basic Principles and Supplementary Material -- References -- List of Algorithms -- List of Examples -- Index of Notation -- Index
Sommario/riassunto	Investigating the correspondence between systems of partial differential equations and their analytic solutions using a formal approach, this monograph presents algorithms to determine the set of analytic solutions of such a system and conversely to find differential equations whose set of solutions coincides with a given parametrized set of analytic functions. After giving a detailed introduction to Janet bases and Thomas decomposition, the problem of finding an implicit description of certain sets of analytic functions in terms of differential equations is addressed. Effective methods of varying generality are developed to solve the differential elimination problems that arise in this context. In particular, it is demonstrated how the symbolic solution of partial differential equations profits from the study of the implicitization problem. For instance, certain families of exact solutions of the Navier-Stokes equations can be computed
