

1. Record Nr.	UNISALENTO991002955059707536
Autore	Farley, Daniel Scott
Titolo	Algebraic K-theory of crystallographic groups : the three-dimensional splitting case / by Daniel Scott Farley, Ivonne Johanna Ortiz
Pubbl/distr/stampa	Cham [Switzerland] : Springer, c2014
ISBN	9783319081526
Descrizione fisica	x, 148 p. ; 24 cm
Collana	Lecture notes in mathematics, 0075-8434 ; 2113
Classificazione	AMS 20H15 AMS 19A31 AMS 19B28 AMS 82D25 LC QA612.33
Altri autori (Persone)	Ortiz, Ivonne Johannaauthor
Disciplina	512.66
Soggetti	Group theory K-theory Cell aggregation - Mathematics
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Sommario/riassunto	The Farrell-Jones isomorphism conjecture in algebraic K-theory offers a description of the algebraic K-theory of a group using a generalized homology theory. In cases where the conjecture is known to be a theorem, it gives a powerful method for computing the lower algebraic K-theory of a group. This book contains a computation of the lower algebraic K-theory of the split three-dimensional crystallographic groups, a geometrically important class of three-dimensional crystallographic group, representing a third of the total number. The book leads the reader through all aspects of the calculation. The first chapters describe the split crystallographic groups and their classifying spaces. Later chapters assemble the techniques that are needed to apply the isomorphism theorem. The result is a useful starting point for researchers who are interested in the computational side of the Farrell-Jones isomorphism conjecture, and a contribution to the growing literature in the field
