

1. Record Nr.	UNISALENTO991003214329707536
Autore	Oehlers, Deric J.
Titolo	Design of FRP and steel plated RC structures [e-book] : retrofitting beams and slabs for strength, stiffness and ductility / by Deric John Oehlers and Rudolf Seracino
Pubbl/distr/stampa	Amsterdam ; Oxford : Elsevier, 2004
ISBN	9780080445489 0080445489
Descrizione fisica	xxiv, 228 p. : ill. ; 25 cm
Altri autori (Persone)	Seracino, Rudolf, 1970-
Disciplina	624.17765
Soggetti	Plates (Engineering) - Fatigue Plates (Engineering) - Design and construction Sealing (Technology) Concrete beams Structural engineering Electronic books.
Lingua di pubblicazione	Inglese
Formato	Risorsa elettronica
Livello bibliografico	Monografia
Nota di bibliografia	Includes bibliographical references and index
Sommario/riassunto	There are a large and ever-increasing number of structures and buildings worldwide that are in need of refurbishment, rehabilitation and strengthening. The retrofitting of beams and slabs for this purpose is now recognized as the most cost-effective and environmentally sustainable method of carrying out this essential renovation work. The authors of Design of FRP and Steel Plated RC Structures are both acknowledged world experts on these techniques and their book has been designed to provide the reader with a comprehensive overview of the established techniques and their applications as well as thorough coverage of newly emerging methodologies and their uses. The comparison of FRP and steel is a particular focus and the authors provide practical examples of where one material might be used in preference to another. Indeed practical, worked examples of how, when, and why specific solutions have been chosen in real-world situations are used throughout the text and provide the user with

invaluable insights into the decision-making process and its technical background. Just as importantly these examples make the understanding and application of these techniques easier to understand for the student and the practitioner. The book is international in appeal, as while no reference is made to specific local codes the authors approach always follows that of the more advanced structural codes worldwide. As such it will remain an essential resource for many years to come. Design of FRP and Steel Plated RC Structures is an important reference for a broad range of researchers, students and practitioners including civil engineers and contractors, architects, designers and builders. Contains detailed worked examples throughout to aid understanding and provide technical insight Covers all types of metal plates and all types of FRP plates Uses design philosophies that can be used with any mathematical model Provides coverage of all main international guidelines
