   Sommario/riassunto   This book is divided into four parts. Part I begins with several chapters
                        on the basics of Skype. Here the reader learns how to install and
                        configure Skype on several platforms including Windows, Max OSX,
                        Linux, and PocketPC. The reader will also learn how to begin making
                        voice over IP calls immediately. Part II deals with the more advanced
                        features of Skype. Here the reader learns how to use Skype on new
                        Skype Ready cell phones, use Skype for more advanced, business-

oriented tasks such as scheduling and file transfers, as well as using SkypeOut. Part III discusses how to integrate Skype with third party networking, communication, and security devices such as routers, firewalls, and mail servers, as well as using the brand new Skype for Business. Part IV covers the Skype Application Programming Interface, Plug-ins, Add-ons, and third party tools. Here the reader learns to develop and customize their own applications using the new, powerful, Skype API. * Skype has over 70,000,0000 users worldwide, and 13 forums with over 25,000 members * Skype's Application Programming Interface (API) allows users to develop their own applications and customize Skype with the information found in this book * Makrus Daehne is one of the most recognized and respected authorities on Skype and he is the forum moderator on the Skype Web site.
