

1.	Record Nr.	UNISALENTO991003270159707536
	Autore	Fueter, Rudolf
	Titolo	Leonhardi Euleri commentationes arithmeticae / edidit Rudolf Fueter
	Descrizione fisica	v. 2 ; 29 cm.
	Collana	Leonhardi Euleri opera omnia. Serie 1. Opera Mathematica ; 4
	Disciplina	510
	Lingua di pubblicazione	Tedesco
	Formato	Materiale a stampa
	Livello bibliografico	Monografia
	Note generali	Riprod. facs. dell'ed. di: Lipsiae et Berolini : B.G. Teubner, 1941, 1944. 1.: volumen tertium ; 2.: volumen quartum.
2.	Record Nr.	UNINA9910986138703321
	Autore	Goswami Alok
	Titolo	Measure Theory for Analysis and Probability / / by Alok Goswami, B.V. Rao
	Pubbl/distr/stampa	Singapore : , : Springer Nature Singapore : , : Imprint : Springer, , 2025
	ISBN	9789819779291 9819779294
	Edizione	[1st ed. 2025.]
	Descrizione fisica	1 online resource (387 pages)
	Collana	Indian Statistical Institute Series, , 2523-3122
	Altri autori (Persone)	RaoB. V
	Disciplina	515.42
	Soggetti	Measure theory Probabilities Measure and Integration Probability Theory Teoria de la mesura Probabilitats Llibres electrònics
	Lingua di pubblicazione	Inglese
	Formato	Materiale a stampa
	Livello bibliografico	Monografia

## Nota di contenuto

1. Measure Theory: Why and What -- 2. Measures: Construction and Properties -- 3. Measurable Functions and Integration -- 4. Random Variables and Random Vectors -- 5. Product Spaces -- 6. Radon-Nikodym Theorem and  $L_p$  Spaces -- 7. Convergence and Laws of Large Numbers -- 8. Weak convergence and Central Limit Theorem -- 9. Conditioning: The Right Approach -- 10. Infinite Products -- 11. Brownian Motion: A Brief Journey.

---

## Sommario/riassunto

This book covers major measure theory topics with a fairly extensive study of their applications to probability and analysis. It begins by demonstrating the essential nature of measure theory before delving into the construction of measures and the development of integration theory. Special attention is given to probability spaces and random variables/vectors. The text then explores product spaces, Radon-Nikodym and Jordan-Hahn theorems, providing a detailed account of spaces and their duals. After revisiting probability theory, it discusses standard limit theorems such as the laws of large numbers and the central limit theorem, with detailed treatment of weak convergence and the role of characteristic functions. The book further explores conditional probabilities and expectations, preceded by motivating discussions. It discusses the construction of probability measures on infinite product spaces, presenting Tulcea's theorem and Kolmogorov's consistency theorem. The text concludes with the construction of Brownian motion, examining its path properties and the significant strong Markov property. This comprehensive guide is invaluable not only for those pursuing probability theory seriously but also for those seeking a robust foundation in measure theory to advance in modern analysis. By effectively motivating readers, it underscores the critical role of measure theory in grasping fundamental probability concepts.
