

1.	Record Nr.	UNISALENTO991003622379707536
	Autore	Boucher, Jules
	Titolo	La simbologia massonica / Jules Boucher
	Pubbl/distr/stampa	Roma : Atanor, stampa 1996
	ISBN	9788871690483
	Edizione	[Nuova ed.]
	Descrizione fisica	XXII, 375 p. : ill. ; 21 cm.
	Disciplina	366.1
	Soggetti	Massoneria - Simboli
	Lingua di pubblicazione	Italiano
	Formato	Materiale a stampa
	Livello bibliografico	Monografia
	Note generali	Sull'occhietto: Jakin : Massoneria e tradizione iniziatica
2.	Record Nr.	UNINA9910739479503321
	Autore	Shen Bo
	Titolo	Nonlinear stochastic systems with incomplete information : filtering and control / / Bo Shen, Zidong Wang, Huisheng Shu
	Pubbl/distr/stampa	London, : Springer, 2013
	ISBN	1-299-19715-9 1-4471-4914-9
	Edizione	[1st ed. 2013.]
	Descrizione fisica	1 online resource (xvi, 248 pages) : illustrations (some color)
	Collana	Gale eBooks
	Altri autori (Persone)	WangZidong ShuHuisheng
	Disciplina	519 519.2 519.22 530.1/5
	Soggetti	Stochastic systems Nonlinear theories
	Lingua di pubblicazione	Inglese
	Formato	Materiale a stampa

Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	From the Contents: Quantized H-infinity Control for Nonlinear Stochastic Time-delay Systems with Missing Measurements -- Nonlinear H-infinity Filtering for Discrete-Time Stochastic Systems with Missing Measurements and Randomly Varying Sensor Delays -- Robust H-infinity Filtering with Randomly Occurring Nonlinearities, Quantization Effects and Successive Packet Dropouts -- H-infinity Filtering with Randomly Occurring Sensor Saturations and Missing Measurements -- Distributed H-infinity Consensus Filtering in Sensor Networks with Multiple Missing Measurements: The Finite-Horizon Case.
Sommario/riassunto	<p>Nonlinear Stochastic Processes addresses the frequently-encountered problem of incomplete information. The causes of this problem considered here include: missing measurements; sensor delays and saturation; quantization effects; and signal sampling. Divided into three parts, the text begins with a focus on H filtering and control problems associated with general classes of nonlinear stochastic discrete-time systems. Filtering problems are considered in the second part, and in the third the theory and techniques previously developed are applied to the solution of issues arising in complex networks with the design of sampled-data-based controllers and filters. Among its highlights, the text provides:</p> <ul style="list-style-type: none"> • a unified framework for handling filtering and control problems in complex communication networks with limited bandwidth; • new concepts such as random sensor and signal saturations for more realistic modeling; and • demonstration of the use of techniques such as the Hamilton–Jacobi–Isaacs, difference linear matrix, and parameter-dependent matrix inequalities and sums of squares to handle the computational challenges inherent in these systems. <p>The collection of recent research results presented in Nonlinear Stochastic Processes will be of interest to academic researchers in control and signal processing. Graduate students working with communication networks with lossy information and control of stochastic systems will also benefit from reading the book.</p>
