Record Nr.	UNISALENTO991003634739707536
Autore	Wendl, Chris
Titolo	Holomorphic curves in low dimensions [e-book] : from symplectic ruled surfaces to planar contact manifolds / Chris Wendl
ISBN	9783319913711
	3319913719
	9783319913698
	3319913697
Descrizione fisica	1 online resource (xiii, 294 pages) : illustrations (some color)
Collana	Lecture notes in mathematics, 0075-8434 ; 2216
Classificazione	AMS 57R17
	AMS 32Q65
	LC QA641-670
Disciplina	516.36
Soggetti	Holomorphic mappings
	Global analysis (Mathematics)
	Manifolds (Mathematics)
	Geometry, Differential
	Complex manifolds
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di bibliografia	Includes bibliographical references and index
Nota di contenuto	1 Introduction ; 2 Background on Closed Pseudoholomorphic Curves ; 3 Blowups and Lefschetz Fibrations ; 4 Compactness ; 5 Exceptional Spheres ; 6 Rational and Ruled Surfaces ; 7 Uniruled Symplectic 4-Manifolds ; 8 Holomorphic Curves in Symplectic Cobordisms ; 9 Contact 3-Manifolds and Symplectic Fillings ; Appendix ; Bibliography, Index
Sommario/riassunto	This monograph provides an accessible introduction to the applications of pseudoholomorphic curves in symplectic and contact geometry, with emphasis on dimensions four and three. The first half of the book focuses on McDuff's characterization of symplectic rational and ruled surfaces, one of the classic early applications of holomorphic curve theory. The proof presented here uses the language of Lefschetz fibrations and pencils, thus it includes some background on these topics, in addition to a survey of the required analytical results on

holomorphic curves. Emphasizing applications rather than technical results, the analytical survey mostly refers to other sources for proofs, while aiming to provide precise statements that are widely applicable, plus some informal discussion of the analytical ideas behind them. The second half of the book then extends this program in two complementary directions: (1) a gentle introduction to Gromov-Witten theory and complete proof of the classification of uniruled symplectic 4-manifolds; and (2) a survey of punctured holomorphic curves and their applications to questions from 3-dimensional contact topology, such as classifying the symplectic fillings of planar contact manifolds. This book will be particularly useful to graduate students and researchers who have basic literacy in symplectic geometry and algebraic topology, and would like to learn how to apply standard techniques from holomorphic curve theory without dwelling more than necessary on the analytical details
