| Sommario/riassunto    | The role and significance of stories in psychotherapy are the subject of this study. The author's principal contention is that all therapies are narrative therapies and that underlying therapy is the telling and retelling of stories.                                                                                                                                                                                                                                                                                                                                         |
