

1. Record Nr.	UNISALENTO991003742059707536
Autore	Williams, Richard G.
Titolo	Ocean dynamics and the carbon cycle : principles and mechanisms / Richard G. Williams, Michael J. Follows
Pubbl/distr/stampa	Cambridge, UK ; New York : Cambridge University Press, 2011
ISBN	9780521843690 (hardback)
Descrizione fisica	xii, 404 p. : ill., maps ; 26 cm
Classificazione	52.9.3 LC GC117.C37
Altri autori (Persone)	Follows, Mick
Disciplina	551.46/6
Soggetti	Chemical oceanography Carbon cycle (Biogeochemistry)
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Machine generated contents note: Preface; List of symbols; Part I. Introduction: 1. Why is the ocean important?; 2. An introductory view of the ocean; Part II. Fundamentals: 3. Transport fundamentals; 4. Physics fundamentals; 5. Fundamental biological processes; 6. Carbonate chemistry fundamentals; Part III. Physical Phenomena and their Biogeochemical Signals: 7. Seasonality of the upper ocean; 8. Ocean gyres and intense currents; 9. Ocean eddies; 10. Ventilation; 11. Cycling and transport of nutrients and carbon; 12. The deep ocean and meridional overturning; Part IV. Synthesis: 13. Integral frameworks; 14. A forward view; Appendix: mathematical definitions and momentum equations; Glossary; Answers; References; Index
Nota di bibliografia	Includes bibliographical references and index.
