Nota di contenuto	Integration of PBL in Multimedia Teaching Platform for Experiments on Complete Denture Prosthodontics -- Computer Application Technology in Enterprise Informatization -- Incorporating Mobile Multimedia in School Student Management -- An Intelligent Learning System to Assist the Medical English Teaching -- Application of CAI Computer Technology in Teaching Western Art History -- Influence of Environmental Factors on Stray Capacitance of GIS -- Research on Personal Credit Scoring Model Based on Artificial Intelligence -- Effectively Enhance the Learning Quality with Dialectical E-learning in Undergraduates -- Transformation Mode of Job Research Results of Hubei Universities -- Design and Application of a Steel Bar Roll Management System -- Design of Agricultural Spherical Robot -- Study on Infrastructure Construction of Higher School.
Sommario/riassunto	This book presents the proceedings of the 2019 International Conference on Intelligent Systems Applications in Multi-modal Information Analytics, held in Shenyang, China on February 19-20, 2019. It provides comprehensive coverage of the latest advances and trends in information technology, science and engineering, addressing a number of broad themes, including data mining, multi-modal informatics, agent-based and multi-agent systems for health and

education informatics, which inspire the development of intelligent information technologies. The contributions cover a wide range of topics: AI applications and innovations in health and education informatics; data and knowledge management; multi-modal application management; and web/social media mining for multi-modal informatics. Outlining promising future research directions, the book is a valuable resource for students, researchers and professionals, and provides a useful reference guide for newcomers to the field.
