1. Record Nr. UNISALENTO991004265230307536

Titolo	Particle physics reference library / Herwig Schopper editor
Pubbl/distr/stampa	Cham : Springer Open, 2020
ISBN	9783030382094 9783030353209 9783030342470
Descrizione fisica	3 v. (ix, 630; ix, 1078; x, 863 p.) : ill. ; 24 cm
Classificazione	53.4 LC QC793
Altri autori (Persone)	Schopper, Herwigauthor Fabjan, Christian W. Meyers, Stephen
Disciplina	539.72
Soggetti	Quantum field theory Elementary particles (Physics) Nuclear physics Particle acceleration String theory
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Also available as open electronic resource
Nota di bibliografia	Includes bibliographical references
Nota di contenuto	Vol. 1: Theory and experiments Vol. 2: Detectors for particles and radiation / Christian W. Fabjan, Herwing Schopper editors Vol. 3: Accelerators and colliders / Stephen Meyers, Herwing Schopper editors
Sommario/riassunto	The first volume of the handbook series contains articles on the standard model of particle physics, both from the theoretical and experimental perspective. It also covers related topics, such as heavy-ion physics, neutrino physics and searches for new physics beyond the standard model. A joint CERN-Springer initiative, the “Particle Physics Reference Library” provides revised and updated contributions based on previously published material in the well-known Landolt-Boernstein series on particle physics, accelerators and detectors (volumes 21A,B1, B2,C), which took stock of the field approximately one decade ago.

Central to this new initiative is publication under full open access

The second volume of the handbook series deals with detectors, large experimental facilities and data handling, both for accelerator and non-accelerator based experiments. It also covers applications in medicine and life sciences.A joint CERN-Springer initiative, the “Particle Physics Reference Library” provides revised and updated contributions based on previously published material in the well-known Landolt-Boernstein series on particle physics, accelerators and detectors (volumes 21A,B1, B2,C), which took stock of the field approximately one decade ago. Central to this new initiative is publication under full open access

The third ovolume of the handbook series deals with accelerator physics, design, technology and operations, as well as with beam optics, dynamics and diagnostics.A joint CERN-Springer initiative, the “Particle Physics Reference Library” provides revised and updated contributions based on previously published material in the well-known Landolt-Boernstein series on particle physics, accelerators and detectors (volumes 21A,B1,B2,C), which took stock of the field approximately one decade ago. Central to this new initiative is publication under full open access
