| Sommario/riassunto    | For more than ten thousand years, Native Americans from Alaska to southern California relied on aquatic animals such as seals, sea lions, and sea otters for food and raw materials. Archaeological research on the interactions between people and these marine mammals has made great advances recently and provides a unique lens for understanding the human and ecological past. Archaeological research is also emerging as a crucial source of information on contemporary environmental issues as we improve our understanding of the ancient abundance, ecology, and natural history of these species. This groundbreaking interdisciplinary volume brings together archaeologists, biologists, and other scientists to consider how archaeology can inform the conservation and management of pinnipeds and other marine mammals along the Pacific Coast.  |

| Sommario/riassunto      | In this book, Víctor Ferreres Comella contrasts the European "centralized" constitutional court model, in which one court system is used to adjudicate constitutional questions, with a decentralized model, such as that of the United States, in which courts deal with both constitutional and nonconstitutional questions. Comella's systematic  |

exploration of the reasons for and against the creation of constitutional courts is rich in detail and offers an ambitious theory to justify the European preference for them. Based on extensive research on eighteen European countries, Comella finds that centralized review fits well with the civil law tradition and structures of ordinary adjudication in those countries. Comella concludes that while the decentralized model works for the United States—there is more than one way to preserve democratic values and that these values are best preserved in the parliamentary democracies of Europe through constitutional courts.
