Sommario/riassunto	Is there a minimum tax to GDP ratio associated with a significant acceleration in the process of growth and development? We give an empirical answer to this question by investigating the existence of a tipping point in tax-to-GDP levels. We use two separate databases: a novel contemporary database covering 139 countries from 1965 to 2011 and a historical database for 30 advanced economies from 1800 to 1980. We find that the answer to the question is yes. Estimated tipping points are similar at about 12¾ percent of GDP. For the contemporary dataset we find that a country just above the threshold will have GDP per capita 7.5 percent larger, after 10 years. The effect is tightly estimated and economically large.

4.	Record Nr.	UNISANNIOPUV0888816
	Autore	Date, Christopher John
	Titolo	Temporal data and the relational model : a detailed investigation into the application of interval and relation theory to the problem of temporal database management / C. J. Date, Hugh Darwen, Nikos A. Lorentzos
