Sommario/riassunto	Au lieu de prendre comme un fait établi l'antagonisme État-autochtones, ce livre explore comment le sujet autochtone ainsi que la position d'altérité à laquelle il est associé est largement tributaire du contexte historique. Par là même, il est tributaire également des

articulations, conflictuelles ou consensuelles, avec les différents projets hégémoniques incarnés par l'État et ses « grammaires nationales ». Partant d'études de cas précis – Mexique, Argentine, Paraguay, Colombie ou Bolivie – l'ouvrage ébauche une réflexion autour de la définition d'un « autre interne » par rapport auquel se définit le sujet national hégémonique.

Nota di contenuto	Chapter 1: Introduction -- Chapter 2: The Ethics of Children Donating Tissue to Another -- Chapter 3: Ethical Frameworks and Their Influence on Practice -- Chapter 4: Regulation of Child Tissue Donors in the United Kingdom -- Chapter 5: Regulation of Child Tissue Donors in Australia -- Chapter 6: Regulation of Child Tissue Donors in the United States -- Chapter 7: Medical Professionals' Views on Legal and Non-Legal Forms of Regulation -- Chapter 8: Conclusion.
Sommario/riassunto	This book examines the position of children who provide tissue to potentially save the life of another. It questions whether child donors of all ages have been treated appropriately and whether they are sufficiently protected in acting as tissue donors, and ultimately considers whether a new regulatory response is needed to benefit donor children. The book couples a legal exposition of the donor child's position with the medico-ethical reality of clinical practice. In recent years, a growing body of literature concerning the clinical experiences and outcomes for child donors has emerged. This book adds to this by

examining another dimension – the regulatory frameworks at play. It examines the ethical arguments for and against children acting as tissue donors and provides an original analysis of the legal and non-legal regulatory frameworks governing children's participation in the United Kingdom, United States and Australia. It combines these doctrinal and theoretical approaches with insights into clinical practice gained from the results of qualitative research conducted with health professionals. The analysis inevitably explores the more general issues of children's right to make medical decisions, the role of parents in decision-making, the value of the best interests test and alternative (legal and ethical) standards, rights of participation of children before the courts, and the role of law and other forms of regulation in a clinical context. .
