| Nota di bibliografia    | Includes bibliographical references and index.  |
| Nota di contenuto       | Frontmatter -- Contents -- 1 Towards a circular economy -- 2 Introduction to polymer science -- 3 Bioplastics -- 4 Recycling of plastics -- Acknowledgment -- Bibliography -- Index |
| Sommario/riassunto      | We cannot imagine a world without plastics. Plastic products make our   |

daily life safe, healthy and convenient. Besides all the benefits, the current plastics economy gives rise to environmental concerns with respect to fossil oil depletion and plastic waste accumulation. In a circular economy, however, plastics can be redesigned for reusability and recyclability. This book makes the topic of sustainable plastics approachable for students and career starters alike, describing the nature and chemistry of (bio)polymers as well as how to create a closed loop of plastic materials.
