

1.	Record Nr.	UNISOBSOBE00056802
	Autore	Benedictus <santo>
	Titolo	1: Prologue-Ch. 7. / [Saint Benoît] ; introduction, traduction et notes par Adalbert de Vogüé ; texte établi et présenté par Jean Neufville
	Pubbl/distr/stampa	Paris : Les éditions du Cerf, 1972
	Descrizione fisica	506 p. ; 20 cm
	Collana	Sources chrétiennes ; 181 Sources chrétiennes . Série des textes monastiques d'Occident ; 34
	Lingua di pubblicazione	Francese Latino
	Formato	Materiale a stampa
	Livello bibliografico	Monografia
	Note generali	Testo originale a fronte
2.	Record Nr.	UNINA9910734898603321
	Autore	Shah Maulin P
	Titolo	Advanced Application of Nanotechnology to Industrial Wastewater / / edited by Maulin P. Shah
	Pubbl/distr/stampa	Singapore : , : Springer Nature Singapore : , : Imprint : Springer, , 2023
	ISBN	981-9932-92-0
	Edizione	[1st ed. 2023.]
	Descrizione fisica	1 online resource (358 pages)
	Disciplina	363.728 628.4
	Soggetti	Refuse and refuse disposal Water Hydrology Nanotechnology Industries Pollution Waste Management/Waste Technology
	Lingua di pubblicazione	Inglese
	Formato	Materiale a stampa

Livello bibliografico	Monografia
Nota di contenuto	Nano-biotechnology based solution to the age old problem of spentwash causing water pollution in the vicinity of distilleries -- Application of nanomaterials in heavy metals remediation from wastewater -- Application of metallic nanoparticles for industrial wastewater treatment.
Sommario/riassunto	<p>This book discusses new and innovative trends and techniques in the application of nanotechnology to industrial wastewater treatment both at a laboratory scale and an industry scale, including treatment, remediation, sensing and pollution prevention. The book also explores unique physicochemical and surface properties of nanoparticles; it highlights advantages they provide for engineering applications. Each chapter covers a different nanotechnology-based approach and examines basic principles, practical applications, recent breakthroughs and associated limitations. Nanotechnology applications to wastewater research have significant impact in maintaining the long-term quality, availability and viability of water. Regardless of the origin—for example, municipal or industrial wastewater—the remediation nanotechnology allows water to be recycled and desalinized in addition to simultaneously detecting biological and chemical contamination. The book describes a broad area of nanotechnology and water research where membrane processes (nanofiltration, ultrafiltration, reverse osmosis and nanoreactive membranes) are considered key components of advanced water purification and desalination technologies that remove, reduce or neutralize water contaminants. Various nanoparticles and nanomaterials that could be used in water remediation (zeolites, carbon nanotubes, self-assembled monolayers on mesoporous supports, biopolymers, single-enzyme nanoparticles, zero-valent iron nanoparticles, bimetallic iron nanoparticles and nanoscale semiconductor photocatalysts) are also discussed. This book is beneficial for students and academicians to understand the recent research advancements in the field.</p>
